C64 Keyboard: Which Cables Do I Need?

You can find three cable drawings in the /Cables/pdf/ subfolder:

- KB_Cab.pdf: The 20-way ribbon cable connecting the keyboard to the keyboard connector PCB.
- KSw_Cab.pdf: The cable connecting the Kernal EPROM adapter PCB to /RESET and /EXROM.
- Ulti_Cab.pdf: The cable connecting the keyboard to the "Buttons" pin header on the Ultimate 64 Elite II or C64 Ultimate mainboard.

Which cables you need depends on how you intend to use the keyboard.

- USB keyboard for VICE: No cables required.
- C64 keyboard without Kernal switching or reset functionality: KB_Cab.
- C64 keyboard with Kernal switching and reset functionality: KB_Cab + KSw_Cab.
- Keyboard connected to an Ultimate 64 Elite II or C64 Ultimate: KB_Cab + Ulti_Cab.

So, you never need more than two cables.
